## Safety Glasses Work!

Eye injuries are terrible. And they're 100-percent preventable. Remember that the eyes are very delicate, made of thin tissues that can't take much damage. You can't blink fast enough to prevent an injury. What if the flying object hazard flies through the eyelid? Significant surgeries are required when serious damage occurs. What could happen? Shavings, grindings and other junk can fly at high velocities into the eye. Eye protection is a barrier between your eyes & the hazard.

## WORKSAFE TIPS

### PROTECT YOUR EYES!!!

- ✓ Eye injuries are 100% preventable.
- ✓ Safety glasses are a barrier between your eyes and flying objects.
- ✓ If there is ANY CHANCE of a flying object, then wear protective eyewear.
- ✓ Use ANSI-approved safety glasses.
- ✓ Wear eye protection when grinding, buffing, cutting, sawing, chipping and when using chemicals.
- ✓ Your eyes are valuable. You only have two.
- ✓ Bad eye injuries will require significant surgery, and a loss of vision will most likely result.
